

Huawei Ascend roadmap: First 960 variant brought forward by nine months

Source: Huawei official announcements

Weekly Facts & Figures.

- **Roadmap:** Huawei moved the Ascend 960DT launch forward to Q1 2027 (three quarters earlier than planned) and the 960PR to Q3 2027, one quarter earlier.
- **Commercial deployment:** More than 1,000 Ascend 910C SuperPoD systems are deployed in commercial data centers, while the Ascend 950 SuperPoD has entered volume commercial use.
- **Demand and supply:** DeepSeek plans to deploy at least 160,000 Ascend 950DT accelerators mainly for inference, but Huawei says supply constraints still limit its ability to meet domestic demand and expand overseas.

What This Means.

Huawei's AI compute push is accelerating from chips to large-scale systems, but supply constraints will determine how quickly that progress translates into broader market adoption.
